SUMMARY

Backend engineer with 4+ years at J.P. Morgan building high-reliability payment and card platforms. Delivered measurable wins in performance, cost, and compliance while shipping internal developer tools adopted by product teams.

EXPERIENCE

Backend Developer

July 2022 – Present

J.P. Morgan Chase & Co.

Mumbai

Core Responsibilities

- Designed and built scalable **RESTful APIs** for a commercial card platform using **domain-driven design** and **microservices**, reducing client onboarding time by **30–40%**.
- Integrated real-time **OFAC screening** into transaction pipelines, achieving **100% compliance** with **zero latency impact** or screening misses.
- Optimized **Datadog** alerts and thresholds, cutting monitoring costs by **64%** while improving incident response speed.
- Automated **Terraform module upgrades** with compatibility checks and safe version bumps, eliminating breaking changes across repositories.

Initiatives & Recognition

- Prototyped an internal **LLM-powered** tool that indexes code across multiple **Bitbucket** repositories to auto-generate **HLD documentation** and answer architecture questions via chat (with cached context and persistent memory). Adopted by product managers to understand unfamiliar codebases without cloning source, replacing outdated Confluence pages.
- Runner-up, **Mumbai Hackathon (2023)**: Built an internal search engine with document indexing and summarization that significantly reduced lookup time.
- Runner-up, **Internal Hackathon (2026)**: Built a visual drag-and-drop automation builder connecting tools such as **Outlook** and **SonarQube** into no-code multi-app workflows.

IMPACTFUL PROJECTS

- **Thinkbrew**: Self-hosted tech blog on **Ghost** running on **AWS EC2** with full end-to-end infrastructure ownership. Published weekly articles for over a year and grew an engaged audience of **65+ subscribers** via Mailchimp. Also built a companion **Flutter** app delivering daily 60-word news summaries.
- **TypedTales**: **Next.js** + **MongoDB** platform for accessible interactive storytelling for children with disabilities. Attracted **50+ users** at launch through targeted school and community outreach.
- **Rise Summit**: Designed and developed the official website under J.P. Morgan's Force for Good program in partnership with Rise Infinity Foundation NGO.

TECHNICAL SUMMARY

Technical Skills: Terraform, Node.js, MongoDB, Firebase, Flask, Django, Spring Boot, AWS, Kubernetes

Certifications: AWS Certified Cloud Practitioner, HashiCorp Certified: Terraform Associate

Achievements: Idea Owner @ J.P. Morgan Global Hackathon (2023, 2025, 2026) | Runner-up (2023, 2026)

Publications: Whitepaper Publications ×2 @ J.P. Morgan

EDUCATION

B.Tech in Electronics and Telecommunication Engineering

2022

Veermata Jijabai Technological Institute
